Subject: Brief Hopi update

Hi Emmanuelle,

I wanted to give you a brief update on Hopi from this week.

Hopi HS: First of all, Garlyn was not willing to let Chuck open the RO vessels and so we didn't get to inspect the membranes. We're scheduled to talk through the issue together in early January. I think there is just too much going on right now and Garlyn didn't want to risk something going wrong with the inspection, but that is just my best guess. On a more positive note, Chuck did get his old TDS meter working and we used it yesterday and it works fine. And so once they do get new membranes, Chuck will be able to chart TDS levels. Also, Chuck and I tracked down some of his WQ sampling results and were able to forward them to datamanager. I think Chuck is now comfortable with forwarding these electronically and so fingers crossed, that will help us all out and we can get away from the faxing. As for his sampling, he has already given the lab the samples for his Q4 arsenic, WQ parameters (EP & DS) and the final (20th) lead and copper sample. I'll follow up with him next week to make sure that Mohave has sent the results.

HCC/HVMC: Edgar, Phil and I completed the waiver applications yesterday for both sites. Edgar wanted to take his time to review them before signing but I think we'll have those off to you shortly.

Lead in Schools: I should have inventory sheets from the head starts in Ktown, Hotevilla, Polacca and U Moenkopi off to you shortly.

Kykotsmovi: Selwyn says that he's dropped off all of the samples to Mohave but that he hasn't received the results yet. The lab made him pull several samples twice since they messed up the analysis the first time around. This seems to be happening a lot with Mohave.

Thanks and have a good long holiday weekend,
Brett
